Applications

Applications for Software Engineering are considered for every quarter. All application materials should be sent to Graduate Admissions by the stated deadline for that quarter. Late applicants can only be considered as non-matriculating students and on a space available basis

Application Deadlines:

Quarter	Domestic	International
Fall:	July 20	April 1
Winter:	November 20	September 1
Spring:	February 20	December 1

The Application procedure is:

- Obtain a complete application packet from Graduate Admissions or our website or apply online through Graduate Admissions website
- Have two official transcripts from each institution you have attended mailed directly to Graduate Admissions.
- Complete the software engineering applicant information form.
- Distribute the provided recommendation forms and envelopes to two individuals who will serve as professional references or use the online reference function.
- Complete a professional autobiographical statement describing the relevance of your experiences to the MSE program and your career objectives in completing the program.
- Request that official GRE scores be sent directly to Graduate Admissions.

Send to Graduate Admissions at Seattle University. Parts of the application may be sent as available. Test scores and tran scripts typically can be sent after filing an application.

Degree Requirements

Minimum requirements for the degree are 47 graduate credits. These include 29 hours of required courses, nine hours of elective courses, and nine hours of software engineering project. Required courses in computing (SEGR 501 and 503) may be waived for students passing a waiver exam and replaced by additional electives. A maximum of 12 credits taken in non-matriculated status may be applied to this program. All degree requirements must be completed within six years after course work has begun.

Required Core Courses

29 Credits Including:

- SEGR 501 Object-Oriented Concepts
- SEGR 503 Data Structures and Algorithms
- SEGR 520 Software Requirements
- SEGR 521 Software Architecture and Design I
- SEGR 523 Human-Computer Interaction
- SEGR 524 Software Construction
- SEGR 525 Data Modeling
- SEGR 526 Software Project Planning
- SEGR 531 Software Architecture and Design II
- SEGR 580 Ethics and Professional Issues in Computing

Elective Courses

9 credits from the following:

- SEGR 530 Software Economics
- SEGR 534 Software Testing
- SEGR 536 Software Project Management
- SEGR 537 Software Quality Assurance
- SEGR 543 Applied Formal Methods
- SEGR 544 Distributed Computing
- SEGR 551 Embedded Systems
- SEGR 570 Artificial Intelligence
- SEGR 572 Software Security

Note: In addition to the above courses, students may take a maximum of three credits of Special Topics (SEGR 591, 592, 593), Software Engineering Seminar (SEGR 594), Independent Study (SEGR 596, 597, 598), or Internship (SEGR 595) for elective credit, without department approval. Students may take up to six credits of graduate courses from other programs with department approval. Approved MBA courses include such topics as leadership, entrepreneurship, high tech marketing, and management of change. Approved CPSC courses may also be taken to fulfill the elective requirement

Required Project Courses

- SEGR 585 Software Engineering Project 1........3 credits
- SEGR 586 Software Engineering Project 2.........3 credits
- SEGR 587 Software Engineering Project 3.......3 credits

Note: Satisfactory performance in the three-quarter software engineering project sequence (SEGR 585, 586, and 587) is required of all MSE students. Students are grouped into teams that complete a significant software project. Students who are not full-time are expected to take only the project sequence in their final year. Students are encouraged not to begin the software engineering project sequence unless SEGR 587 will be their final course in the program. All participants in the project sequence will be required to sign a Seattle University intellectual property (IP) and computer project room agreement, and may be required to sign an IP agreement with the project sponsor.

Typical Program Schedules

Three -year plan with SEGR 501 and 503 required

	Fall	Winter	Spring	Summer
Year 1	SEGR 501	SEGR 503	SEGR 525	SEGR 580
	SEGR 520	SEGR 521	SEGR 531	
Year 2	SEGR 524	SEGR 526	SEGR 523	
	Elective	Elective	Elective	
Year 3	SEGR 585	SEGR 586	SEGR 587	

Three -year plan with SEGR 501 and 503 waived

	Fall	Winter	Spring	Summer
Year 1	SEGR 520	SEGR 521	SEGR 525	SEGR 580
	Elective	Elective	SEGR 531	
Year 2	SEGR 524	SEGR 526	SEGR 523	
	Elective	Elective	Elective	
Year 3	SEGR 585	SEGR 586	SEGR 587	

Two-year plan for fulltime students

	Fall	Winter	Spring	Summer
Year 1	SEGR 501	SEGR 503	SEGR 525	SEGR 580
	SEGR 520	SEGR 521	SEGR 531	
	Elective	SEGR 526	SEGR 523	
Year	SEGR 524	SEGR 586	SEGR 587	
	SEGR 585	SEGR 526		
	Elective	Elective		

^{*}International students may need to take additional elective credits to maintain their student visa status.

Faculty

Richard LeBlanc, PhD, University of Wisconsin, Chair Roshanak Roshandel, PhD, University of Southern California Lirong (Annie) Dai, PhD, University of Texas at Dallas Adair Dingle, PhD, University of Texas at Dallas Eric Larson, PhD, University of Michigan Yingwu Zhu, PhD, University of Cincinnati Jeff Gilles, MS, University of Iowa

Our Adjunct faculty are working industry professionals drawn from many of the corporations in the Seattle area, such as Microsoft and Boeing.

Seattle University

Seattle University was founded in 1891 by Jesuit priests. As one of 28 Jesuit colleges in the United states, we are dedicated to teaching and educating for leadership and service. While we have grown to be the largest independent institution in the Pacific Northwest, we still enjoy a small-college atmosphere that balances academic challenges with personal, individual attention. We offer a diverse and quality curriculum to students of every religion and culture, and our faculty members are committed to a strong student-teacher relationship.

For Additional Information

"Seattle University does not discriminate on the basis of race, color, religion, sex, national origin, age, disability, marital status, sexual or political orientation, or status as a Vietnam-era or special disabled veteran in the administration of any of its education or admission policies, scholarship and loan programs, athletics, and other school-administered policies and programs, or in its employment policies and practices. All University policies, practices and procedures are administered in a manner consistent with Seattle University's Catholic and Jesuit identity and character. Inquiries about the non-discrimination policy may be directed to the University's EEO Officer and Title IX coordinator, University Services Building 107, (206) 296-5870."

Course Descriptions

SEGR 501 Object-Oriented Development

Introduction to principles and techniques of object-oriented development. In-depth understanding of object-oriented concepts, including abstraction, encapsulation, inheritance, subtypes, subclasses, polymorphism and support for re-use.

SEGR 503 Data Structures & Algorithms

Basic strategies of algorithm design: top-down design, divide and conquer, average and worst-case complexity, asymptotic costs, simple recurrence relations. Choice of appropriate data structures such as arrays, stacks, queues, trees, heaps, graphs, hash tables, etc. Applications to sorting and searching. Introduction to discrete optimization algorithm: dynamic programming, greedy algorithms. Prerequisite: SEGR 501.

SEGR 520 Software Requirements

Definition of types of requirements; elicitation processes; analysis techniques; documentation methods; validation methods and security issues.

SEGR 521 Software Architecture & Design I

Fundamentals of software architecture design, modeling, and analysis. Impact of architectural design choices on quality. Architectural styles, architectural evolution, domain specific software engineering, and software product families.

SEGR 523 Human-Computer Interaction

Relationship of user interface design to human-computer interaction. Interface quality and methods of evaluation; dimensions of interface variability; dialogue genre, tools and techniques; user-centered design, task analysis and implementation.

SEGR 524 Software Construction

High-quality life cycle practices; key programming decisions; design practices; classes; defensive programming; using variables and types; collaborative work; developer testing; re-factoring, code-tuning and system considerations; layout; style and documentation. Prerequisite: SEGR 531 & 525.

SEGR 525 Data Modeling

Data design and modeling for transactional and analytical systems; the use of relational and object databases; database security issues; database performance issues; and data access. Pre or co-equisites: SEGR 503.

SEGR 526 Software Project Planning

Initiation and scope definition; software project planning process; deliverables; effort, schedule and cost estimation; resource allocation; risk management; quality management; and management; project planning and estimating tools.

SEGR 530 Software Economics

Business decision-making process; time value of money; comparing proposals; for-profit decisions; not-for-profit decisions; estimation; risk and uncertainty; buy vs. build decisions, outsourcing costs and return. Prerequisite: SEGR 520 and SEGR 526.

SEGR 531 Software Architecture & Design II

Fundamentals of detailed design and architectural refinement using model consistency, traceability, architectural patterns, and model driven development. Integration with exisiting systems. Architecture and design recovery. Prerequisite: SEGR 521.

SEGR 534 Software Testing

Test levels (unit, integration and system); test objectives testing techniques, measures and process (planning, test case generation and defect tracking). Students may not get credit for both SEGR 534 and CPSC 534. Prerequisite: SEGR 503.

SEGR 536 Software Project Management

Management of software projects (implementation of plans, supplier and subcontractor contract management, implementation of measurement process, monitoring and controlling process, and reporting); review and evaluation (determining satisfaction of requirements, reviewing and evaluating performance); project closure; software engineering measurement; process improvement. Prerequisite: SEGR 526.

SEGR 537 Software Quality Assurance

Software engineering process (implementation and change, definition and measurement); software quality (fundamentals, process and practical considerations); Capability Maturity Model (CMM) for software. Evaluate current projects. Prerequisite: SEGR 520 and SEGR 526.

SEGR 543 Applied Formal Methods

Formal techniques for building reliable systems. Use of abstractions for concisely and precisely defining system behavior. Formal logic and proof techniques for verifying the correctness of programs. Hierarchies of abstractions, state transition models, Petri Nets, communicating processes. Operational and definitional specification languages. Prerequisite: SEGR 503.

SEGR 544 Distributed Computing

Design and analysis of distributed systems, distributed objects, middleware, quality of service in distributed systems and emerging topics in distributed computing. Students may not get credit for both SEGR 544 and CPSC 544. Prerequisite: SEGR 503.

SEGR 551 Embedded Systems

Methods, techniques, and tools for design, analysis, and development of embedded systems; real-time concerns; performance, distribution, dynamism, and mobility concerns. Prerequisite: SEGR 503.

SEGR 570 Artificial Intelligence

Survey of artificial intelligence as it applies to software engineering. Acquisition and representation of knowledge. Search strategies. Selected applications, such as natural language processing, image recognition, planning, neural nets, and expert systems. Students may not get credit for both SEGR 570 and CPSC 570. Prerequisite: SEGR 503.

SEGR 580 Ethics & Professional Issues in Computing

Examination of the role and impact of information and communication technology in society, with emphasis on ethical, professional, and public policy issues. Prerequisite: Graduate standing in the MSE program.

SEGR 572 Software SecurityIntroduction to software dependability, software security vs. security systems, security concerns in various phases of software development life cycle, risk management framework and threat modeling, security analysis (worms, viruses, physical leaks, root kits, Trojans, etc.), common exploits, legal and ethical issues and emerging topics in software security. Students may not get credit for both SEGR 572 and CPSC 572.

SEGR 591, 592, 593 Special Topics

May include such topics as artificial intelligence, data privacy, embedded systems, ethics of computing, programming languages, real-time systems, soft-ware metrics, and other software engineering topics. A maximum of three credits of 59x courses may be taken toward the MSE degree without department approval. Prerequisite: instructor permission.

SEGR 594 Software Engineering Seminar

Examination of advanced current topics and issues in software engineering using a seminar approach. Course may be taken up to three times. A maximum of three credits of 59x courses may be taken toward the MSE degree without the department approval. Prerequisite: instructor permission.

SEGR 595 Internship

By permission only. Supervised practical training combined with academic studies in which students apply and develop their software engineering knowledge and skills working for a business or non-profit institution. Students are required to conduct related academic studies under the supervision of a faculty advisor. A maximum of three credits of 59x courses may be taken toward the MSE degree without department approval.

SEGR 596, 597, 598 Independent Study

Independent research and in-depth study of topics under the supervision of a faculty advisor. A maximum of three credits of 59x courses may be taken toward the MSE degree without department approval. Prerequisite: instructor permission.

Required Project Courses

SEGR 585, 586, 587 Software Engineering Project 1,2 &3

A three-quarter sequence in which students are grouped into teams, and each team completes a year-long software project. The sequence begins in the fall and ends spring quarter. Prerequisite: completion of core courses and departmental approval. All participants in the Project sequence will be required to sign a Seattle University intellectual property (IP) and computer project room agreement, and may be required to sign an IP agreement with the Project Sponsor.

COMPUTER SCIENCE AND SOFTWARE ENGINEERING

SEATTLE UNIVERSITY **Master of Software Engineering**

Why Graduate Study in Software Engineering?

The software industry requires highly skilled people to develop and maintain the computer programs that support our society: programs that do everything from managing financial systems to controlling high-performance aircraft.

Graduate study in software engineering offers the software professional the mix of managerial and technical education necessary to understand and apply advanced software engineering principles vital to industry.

Students enter the master of software engineering (MSE) program with a variety of interests and experiences, but they share a common goal: to improve their mastery of software development and maintenance. By studying a comprehensive range of topics, MSE students acquire the practical and theoretical skills to confidently address difficult software issues. Our graduates enjoy the increased financial rewards, heightened responsibilities, and enhanced job challenges that accompany an MSE degree.

Our Students

The typical MSE student is a software professional with at least two years of software development or maintenance experience. Many MSE students have a traditional computer science education; other students come to the program from diverse backgrounds, including various engineering disciplines, mathematics, the physical and biological sciences, and business. This combination of experience and diversity promotes a cross-pollination of issues and ideas throughout the program.

Our Tradition

Seattle University has long been a leader in software engineering education. It established its pioneering MSE program in 1979, and awarded the world's first MSE degree in 1982.

Our graduate faculty have extensive industrial experience as well as strong academic credentials. Our curriculum has been shaped by close contacts with local industry, ensuring that courses are relevant to the workplace and that projects are tailored to the professional needs of our students.

Our Program

The MSE program at Seattle University is designed for working professionals. All classes are typically offered in the evenings. The courses are aligned with the Guide to the Software Engineering Body of Knowledge, (SWEBOK), a project of the IEEE Computer Society Professional Practices Committee. The program builds on the computing experience of its students by providing course work on a variety of software engineering and computer science topics, with an emphasis on team work and disciplined approach to problem solving. We offer a balanced core curriculum of technical and managerial courses, and a choice of elective streams to address areas of personal interest. Principles and techniques learned throughout the program are integrated into a year-long software project as the capstone experience.

Admission Requirements

- A four-year Bachelor's degree, in computer science or a related discipline, earned at a regionally accredited school. Completed Application for Graduate Admission and nonrefundable application fee (waived for Seattle University Alumni
- Minimum GPA of 3.00 calculated with coursework from all post-secondary educational institutions attended in the last 90 quarter/60 semester credits of your bachelor's degree and any post-baccalaureate coursework.
- Current resume reflecting at least two years of professional ex perience in software development or maintenance.
- Completed Software Engineering Applicant Information form noting working knowledge of at least one programming language, such as C++, Java, or C#.
- Professional autobiography.
- Two professional recommendations using the MSE recommendation forms. At least one of the recommendations should be prepared by a supervisor.
- Official Graduate Record Exam (GRE) General Test scores from within the past five years. The Subject Test in Computer Science is optional.
- If English is not applicant's native language, official TOEFL paper-based score of 580 (92 internet-based or 237 computer-based) required. Equivalent MELAB and IELTS scores also accepted to determine English Proficiency.

07/11/12
